Typical Applications

Crown 69 Anti-Spatter can be used on MIG nozzles, cups, contact tips, jigs and fixtures, or on parts to be welded where spatter is objectionable.

Crown 69 Anti-Spatter is silicon free, non-migratory and compatible with all metals. Aerosol cans are CO₂ propelled. Use only in well ventilated areas.

Procedure

Aerosol Application

The Crown 69 Anti-Spatter aerosol container can be used in any position. Point arrow on nozzle toward object to be protected and spray freely. On flat surfaces, spray with sweeping motion about 10" from surface. For nozzles and tips use rotating motion being sure to cover inside and outside of entire tip.

Bulk Liquid Application

Bulk material may be painted on, used as a dip, or used in hand sprayers. After welding wipe off spatter and excess of Crown 69 Anti-Spatter with cloth.

Use in a well-ventilated area. Avoid prolonged or repeated breathing of vapor or contact with skin or eyes. Wear chemical goggles if the method of use presents the likelihood of eye contact. PVA gloves should be worn.

If Crown 69 Anti-Spatter is left for too long on magnesium and/or aluminum, it will turn the metal black. Use the Crown 69-W Anti-Spatter (water-based anti-spatter) instead.
